## DETAILED ACTION

### *Drawings*

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the “determining whether the first rotation mode is suitable for the storing and reproducing of the user’s request” and “if the first rotation mode is not suitable for the storing and reproducing of the user's request, changing from the first rotating mode to a second rotating mode and writing the user data to the recording medium at the second rotating mode” must be shown or the feature(s) canceled from the claim(s). Figure 6 has the steps s3, “rotating at speed requested by user” and s4, “changing speed to user’s request”. These steps actually specify that the user requests a speed. These two steps are not the same as “determining whether the first rotation mode is suitable for the storing and reproducing of the user’s request” and “if the first rotation mode is not suitable for the storing and reproducing of the user's request, changing from the first rotating mode to a second rotating mode and writing the user data to the recording medium at the second rotating mode”.

No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure

Art Unit: 2627

must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-24 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims newly recite the limitation “if the first rotation mode is not suitable for the storing and reproducing of the user's request, changing from the first rotating mode to a second rotating mode and writing the user data to the recording medium at the second rotating mode”.

The examiner cannot ascertain where in the specification, including the detailed description and the drawings, support for this limitation is found. The only description found related to changing the rotation is related to the controller checking whether the disc is rotating at a speed corresponding to the speed of storage and reproduction designated by the user request, and the controller controls and changes the rotation speed of the spindle motor through a rotation control unit (See for example Figure. 6 step S3 and the description on page 16, lines 6-24). No determination is made to change from the first rotating mode to a second rotating mode and writing the user data to the recording medium at the second rotating mode, if the first rotation mode is not suitable for the storing and reproducing of the user's request. This is not shown in the drawings or the specification. Both the drawings and the specification teach changing the speed to that requested by the user. Hence, this new limitation represents new matter added to the claims.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2627

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
